# Quick Start Guide
Geomni™ Mobile App

Geomni™

The Geomni™ Mobile App helps you quickly capture UAV and ground imagery along with metadata. Once these are uploaded, they combine with our satellite and high-resolution baseline imagery and data to create the most accurate data package and Xactimate sketch.

The Geomni™ Roof data package contains roof measurements, area, and slope. A Geomni™ Property data package includes everything that a Roof data package does plus material type, window locations, outside wall dimensions, and more.
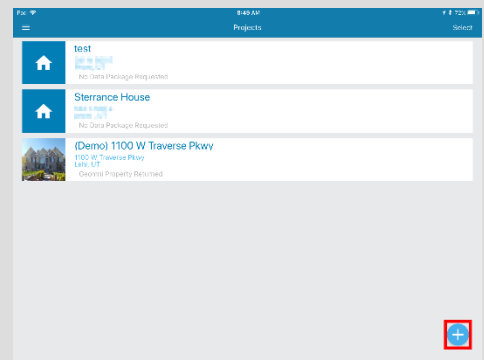

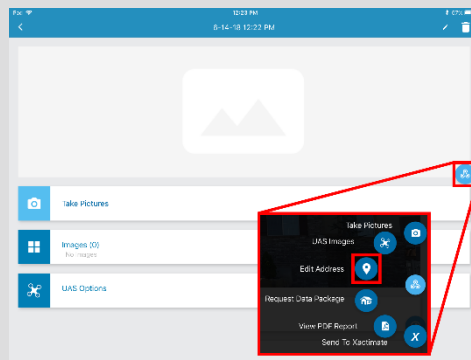

---

1. Open the main menu. Click "Settings."

**2.** Enter your payment information. Click "Save."
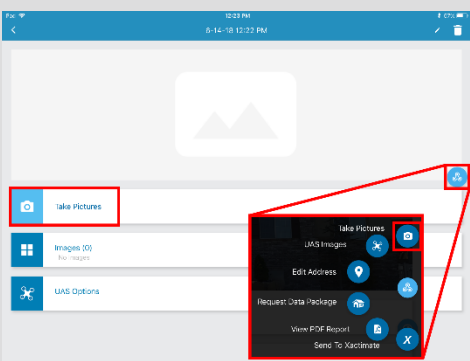

3. Press the "Plus" icon.

**4.** Press the "Edit Address" icon.

**5.** Fill in the property's address. When completed, press "Done."

---

6. Click "Take Pictures" in the action bar or in the action menu.
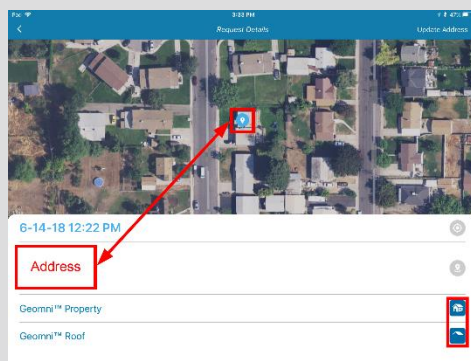

7. Capture images. Click the "Check" icon to close the camera and upload the images.
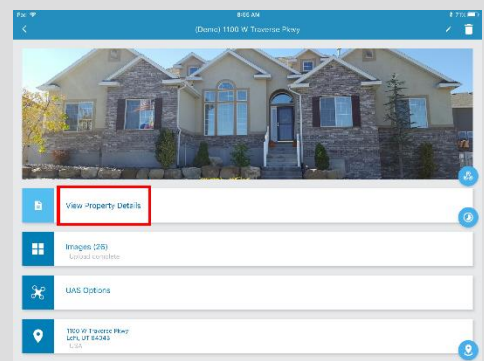

8. Press "Request Data Package" either in the action bar or the action menu.

9. Make sure the map and the address match. Select a data package.

10. Press "View Property Details" in the action bar to view the data package.

Tip: Uploading images without Wi-Fi uses a lot of your own cellular data
